PRESIDENT'S MESSAGE

Architecture is a noble profession which deals with the wellbeing of human beings and Society. Its routes are as ancient as the civilization. Popularly defined as combination of Arts and Technology, it ensures creation of built environment ensuring health, hygiene, safety and happiness of the occupants as well as visitors.

In India, architecture is diverse and encompasses a range of styles and traditions. From ancient temples and palaces to modern skyscrapers, India's built environment reflects its long and complex history, as well as its unique cultural and geographical diversity.

The career of Architect is very promising and satisfying, being 'Professional' one is capable of starting the practice, in the modern terms 'start-up' at the earlier stage of life with minimal investment. Hence, Architects are popularly known as 'Job Givers' rather than 'Job Seekers'.

As aptly described by Hon'ble Prime Minister, Shri Narendra Modi Ji, this is the 'Amrit Kal' of Indian Civilisation and in the days to come, we would be the biggest service providers of the world. The construction and infrastructure activities across India are at peak and the Architects have to positively contribute to the development of Nation as never before.

NATA is the first step towards this glorious career and I, on behalf of Council of Architecture wish you all the very best. Council recognises the importance of providing quality education in Architecture and we at Council, thrive to ensure the excellence at par with global standards, facilitating best resources and opportunities.

Council is enthusiastic about fostering and expanding educational and professional ties within our field. Together, I am confident that we can achieve greater heights and make an everlasting impact on our built environment.

I extend my best wishes for all the aspiring 'to be' architects for a bright future and congratulate you for taking the first step towards profession of Architecture.
